Workers should be provided with PPE's e.g. ear muffs when operating noisy machinery. Consider noise levels when purchasing machinery. Plant layout should be established taking into consideration minimal sound generation.
Particulate, air emissions and odor	<ul style="list-style-type: none"> The plant will be installed by professional engineers and will be fitted with a complete antipollution system. This will include wet scrubbers to remove particulates and sprinkled with calcium hydroxide to remove sulphur oxides. The system will be fitted with deodorization machine to extract sulphur hydroxide that causes bad smell. The gas that cannot be under normal pressure and will go back to combustion system. It will be used as fuel material to heat the reactor. Undertake daily PH monitoring and quarterly and annual air quality measurements to ensure efficiency of the wet scrubber. Workers should be provided with PPE's e.g. nose masks and goggles during construction. Regularly sprinkling water on areas generating dust. Ensure use of best technology of gas plants. Air emissions from plant should be monitored and analysis undertaken periodically.
Soil and ground water pollution	<ul style="list-style-type: none"> The surface will be concreted and bunded. Design should ensure surface flow is drained suitably into the public drains during construction. Drainage channels should be installed in all areas that generates or receives surface water e.g. car park, along the building block edges of the roofs.
Waste generation	<ul style="list-style-type: none"> Carbon black and steel wires by products will be sold as raw materials in other industries. Process water will be recycled back to the process. Toilet effluent will be channeled to septic tank and soak pit. General waste must be removed from the site by a licensed waste handler. Non usable solid waste materials generated during construction shall be transported to a NEMA designated dumping site.
